Next Prospect

An account-level outbound planning tool for Vercel. It turns public company evidence into several timely, product-specific sales angles, identifies the right buyer for each, and drafts grounded first-touch outreach for human review.

~200 people in Vercel GTM

12K prospects sourced each week

<10% reply rate for best outbound

CONTEXT

The team already has prospect volume.

The time cost is turning scattered signals into a relevant first touch. Reps still need to decide what to pitch, why now, and who owns the problem.

PRODUCT OBJECTIVE

Surface the strongest sales angles.

Match the prospect's current priorities and timing signals to relevant Vercel products. For each angle, identify the right buyer and a grounded reason to reach out.

REQUIREMENTS

What the product must do

01 **Recommend multiple sales angles**

Return up to three product-specific conversations, each tied to current evidence and timing.

02 **Explain why now**

Use current public signals from the prospect or a relevant Vercel release.

03 **Identify the buyer**

Select the likely owner and include relevant public activity when available.

04 **Account for region**

Use direct EMEA messaging and privacy context only when it is supported.

05 **Draft a first touch**

Write a concise note with the trigger, relevance, and a meeting or demo ask.

06 **Keep a review step**

Show the evidence and draft before anything moves into the rep's workflow.

SOLUTION FLOW

Research	**Rank**	**Select**	**Draft**	**Review**
public signals	product fit	buyer	first touch	human decision

SCOPE

Included

- Domain or CSV input and public research.
- Catalog evaluation, buyer selection, and drafting.
- Dashboard review with optional downstream handoff.

Not included

- Connecting to Vercel's internal CRMs or data sources.
- Rep-level authentication and personalization.
- Large-scale latency and concurrency tuning.

GUARDRAILS

Use public evidence only. Keep sensitive customer and Vercel information out of drafts. Require human review before use.
